A Process Framework for Enterprise-Wide Integration

Dave Walden

General Dynamics Advanced Information Systems

Bloomington, Minnesota USA

Presented at the:

NDIA/SEI Third Annual CMMI Technology Conference and Users Group

Denver, Colorado USA

Purpose

- Provide an overview of the GDAIS enterprise-wide process framework
- Provide insight into the effort required to create and maintain it
- Provide examples of the operational savings and lessons learned

Topics

- Background Information -- Why change?
- GDAIS Enterprise Process Framework
- Enterprise Process Asset Library (PAL)
  - Web-Based PAL Implementation
    - Features
- Summary & Conclusions
  - Benefits & Lessons Learned
  - Questions

What We Have Learned…

- It’s not just a software issue …
  - It’s not just a systems issue …
    - It’s not just an engineering issue
      - It’s also an enterprise issue

- It’s not just a value chain issue …
  - It’s not just an organizational issue …
    - It’s also a customer issue
    - It’s also a teammate issue
    - It’s also a supplier issue

The Problem with Standards

- There are too many of them
- They are inconsistent
  - Overlap
  - Holes
- Customer mandate (or whim)
- They evolve (just like COTS)
- Future needs introduce a whole new set of challenges
  - Span of systems
  - Domain applicability
  - etc.

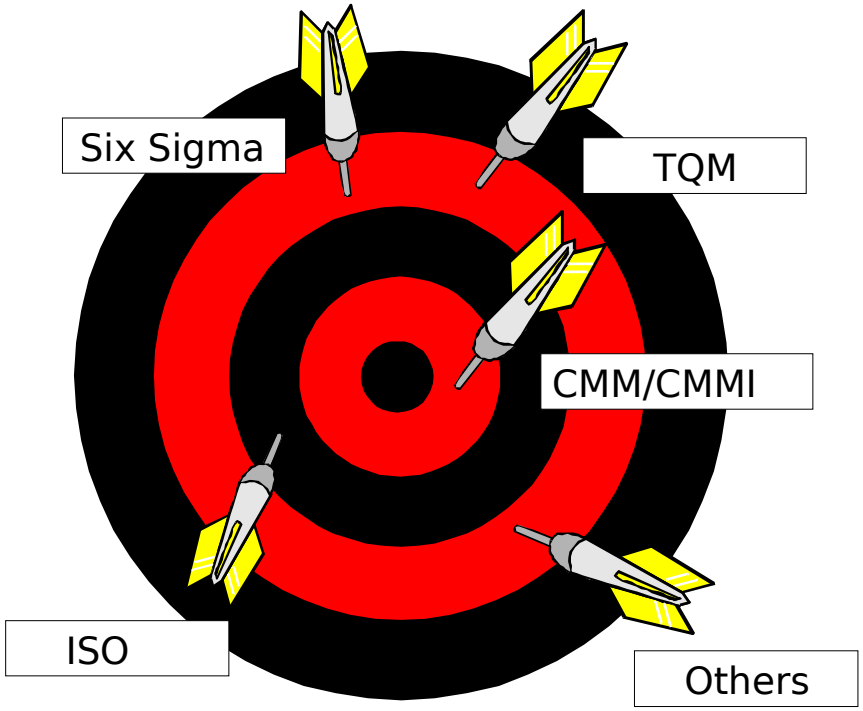
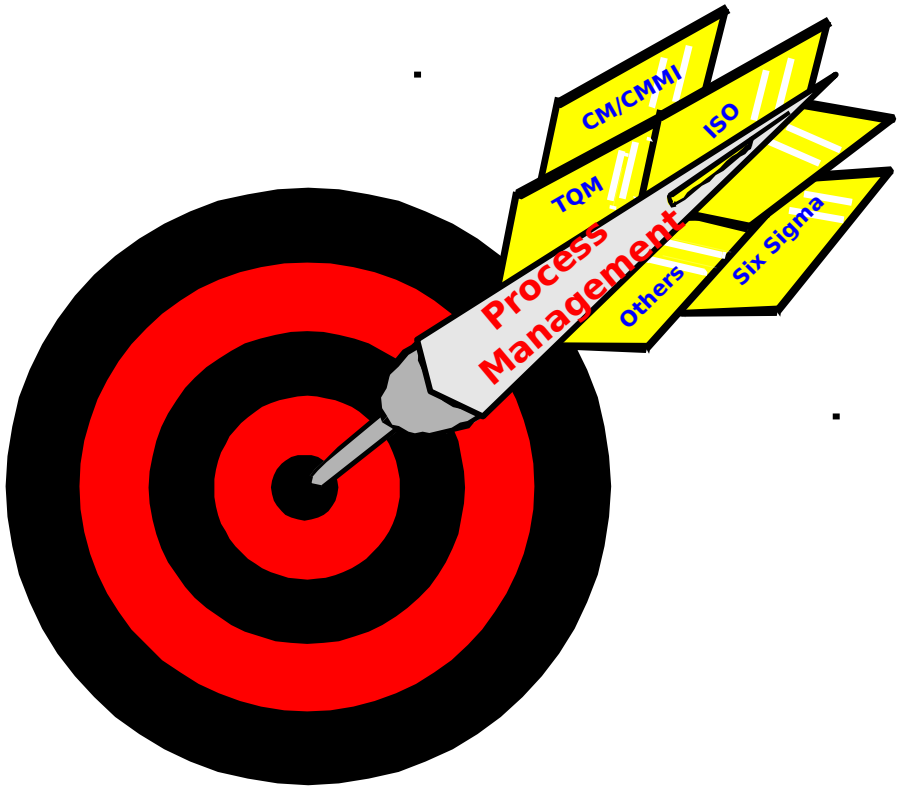
Approach 1 – Integrate Our Process Improvement Efforts



Disparate improvement efforts



Integrated improvement efforts

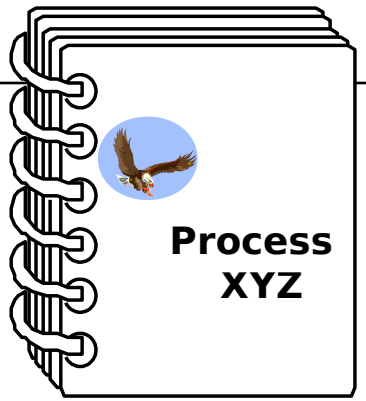
Approach 2 – Adopt a Changing Maxim for Our Processes

OLD: External compliance frameworks & standards drove the development of stove-piped documentation infrastructures; as a result, internal business needs & req'ts have been adversely impacted.



Document-based

Performance-based

NEW: Internal & external business needs drive development of a set of enterprise processes; in turn, through design, the enterprise processes will meet all external frameworks & standards.

Finding Information

Click here to link to the GD Corporate P&Ps

Click here for general process-related information

Click on this area of interest in the left frame or on the Framework diagram to get to process

Click here to access exemplary assets from previous programs.

Click here to submit performance improvement requests

You can also search for items.

Benefits & Lessons Learned

- Benefits
  - Common language
  - Enterprise focus
  - Reduced maintenance costs

- Lessons Learned
  - Need top-level support
  - Keep ownership with the functional organizations
  - Web-based system increases accessibility
